Stocks of Grains

in All Positions

October 24, 1960

RECORD STOCKS OF CORN, SORGHUM GRAIN AND WHEAT

Stocks of wheat and old crop corn and sorghum grain in all positions on October 1 moved to new record high levels for the date. Wheat stocks of 2,350 million bushels were a tenth above the previous record, stocks of old corn of 1,799 million bushels exceeded the previous record by nearly a fifth and sorghum grain increased 14 percent over the record of a year ago. Barley and oats stocks were slightly larger than a year ago but well below record levels. The moderate increases in oats and barley combined with the sharp increases in corn and sorghum grain to push feed grain stocks to a new record high level and 13 percent above a year ago. Stocks of old crop soybeans were reduced sharply below the level of a year earlier with rye and flaxseed stocks registering gains over a year ago.

Wheat stocks of 2,350 million bushels stored in all positions were the largest of record for October 1, more than one-half larger than average and a tenth larger than a year earlier. The stocks total was nearly three-fourths larger than the 1960 production, reflecting a continued large carry-over of old wheat on July 1. Off-farm wheat stocks of 1,795 million bushels were the largest of record. About two-thirds of the total stocks and more than three-fourths of the off-farm stocks were either owned by the Government or were under Government loan.

Rye stocks of 35 million bushels stored in all positions were almost a fourth larger than a year ago, a third above average and the largest since 1955. Farm stocks were increased rather sharply, 36 percent above last October 1, and off-farm stocks were up 14 percent. Stocks were almost equally divided between the two positions. Holdings in CCC bins continue relatively small but more than a fourth of the off-farm total was either owned by CCC or under CCC loan.

Old Corn in all storage positions on October 1, 1960 totaled 1,799 million bushels, 18 percent above the previous record carry-over of a year ago. Holdings on farms of 464 million bushels were 40 percent above last year. However, nine-tenths of these farm stocks were under CCC loan including resale and purchase agreements. Stocks in all off-farm positions amounted to 1,335 million bushels of which more than 95 percent were owned by CCC. Off-farm stocks were 11 percent higher than a year earlier. Disappearance of corn from all storage positions during the July-September quarter, at 764 million bushels, was 13 percent above the same quarter last year.

Oats stored in all positions totaled 1,100 million bushels, about a tenth above the small holdings of a year earlier, but 5 percent below the 10-year average.

UNITED STATES DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

GrLg 11-1 (10-60)

Crop Reporting Board

Washington, D. C.

Nearly 90 percent of the total stocks were on farms, about the usual proportion for this time of the year. Off-farm stocks were 8 percent above October 1, 1959. Disappearance during the July-September quarter of 347 million bushels was the smallest since records were started in 1943.

Barley stocks in all positions on October 1 totaled 465 million bushels, slightly above holdings of a year ago but well below the record October 1 stocks of 502 million bushels in 1958. Farm stocks of 277 million bushels were up 10 million bushels from a year earlier. However, holdings in CCC bins and all commercial storages were lower than on October 1, 1959. The CCC owned about one-third of the 188 million bushels stored in off-farm positions and nearly a fifth of the farm stored barley was under Government loan including resale and purchase agreements. Disappearance during the July-September quarter, at 118 million bushels, was 23 percent less than the record 152 million bushel disappearance for the same quarter last year.

Sorghum grain carry-over stocks in all positions on October 1, at 581 million bushels, were a record high for the date--14 percent larger than the previous high of a year ago. Stocks in off-farm storages totaled 558 million bushels and were nearly all owned by CCC. Stocks of old crop sorghum grain on farms amounted to a record 22.6 million bushels and were 3.8 million bushels above a year earlier. Disappearance of sorghum grain from all storage positions during the July-September quarter approached 56 million bushels, nearly three times the relatively small disappearance during the comparable period last year.

Old Soybean carry-over stocks in all storage positions on October 1 were estimated at 23.3 million bushels. Although these stocks are down nearly two-thirds from a year ago they are still the second highest of record for the date. Most of the stocks--19.8 million bushels--were in off-farm positions as farm stocks amounted to only about 3.5 million bushels. Off-farm stocks include nearly 9 million bushels owned by CCC. Last October 1 off-farm stocks totaled 45 million bushels of which nearly 42 million bushels were owned by CCC. In addition at that time about 13 million bushels or three-fourths of the farm stocks were stored under the Government resale program.

From an estimated supply of 600 million bushels (carry-over October 1, 1959 of 62 million plus 1959 preliminary production of 538 million bushels) a disappearance of about 577 million bushels was indicated for the crop year by the October 1 stocks. Known disappearance for the period includes 392.4 million bushels processed for oil. About 141 million bushels were exported. Seed, feed and losses are estimated at 34 million bushels. There were also about 3 million more new crop soybeans processed in September 1959 than comparable crushing this year. Thus actual disappearance for the crop year totals about 570 million bushels. This gives a difference of slightly over 1 percent from the indication of production and stocks.

Flaxseed stocks in all storage positions totaled 26.4 million bushels. This was well above the 23.2 million bushels on hand a year earlier but sharply below the average of 39.2 million bushels. Current stocks indicate a disappearance during the July-September quarter of 7.2 million bushels from a supply of 33.6 million (carry-over of 3.0 million plus a new crop of 30.6 million bushels). During the quarter, crushings were reported at 4.1 million bushels and exports are estimated at 1 million bushels. This does not take into account new flaxseed processed prior to July 1.
